

(c) HE-DVR Grounded QA

```
Input Hard Evidence Anchor (APEB -> Qwen-3B):
• Top-2 Diagnoses: MI=0.54, CD=0.58 | u=0.52
• Territory: Inferior=0.84, Anterior=0.03
• Intervals: HR=92 bpm, PR=112 ms (valid=0.64),
  QRS=179 ms (wide=0.92), QTc=432 ms
-----------------------------------------------------------------
Question (ECG-QA Single-Choose):
Which diagnostic symptom does this ECG show, non-
diagnostic t abnormalities or myocardial infarction
in inferior leads, including uncertain symptoms?
-----------------------------------------------------------------
Gold: myocardial infarction in inferior leads

× Illustrative soft-token-only failure:
  "anterior myocardial infarction"

✓ VERA-ECG (real prediction):
  "myocardial infarction in inferior leads"  (EM ✓)
```
